

THE DIDACHE

WHERE PHYSICAL
STEWARDSHIP BEGINS

*A SYSTEM FOR STEWARDING THE ONE BODY YOU
WERE GIVEN, SO IT CAN CARRY THE WEIGHT OF THE
LIFE YOU HAVE BEEN CALLED TO LIVE.*

*"IT'S TIME TO BUILD A BODY
THAT'S BUILT **4** MORE."*

BODY · MIND · MISSION · CONNECTION

JAYME OLSON · FOUNDER, LEGACY PERFORMANCE

PART ONE

THE REBEL & THE SAINT

THERE ARE TWO WAYS

THERE ARE TWO WAYS. AND A GREAT DIFFERENCE BETWEEN THEM.

One way leads to a body that serves your life. The other leads to a body that limits it. And between the two ways there is a great difference. You already know which one you have been walking.

You lead organizations, shepherd congregations, and raise families. The leaders I work with — mission-driven men and purpose-driven women — are capable and driven in every room. Except this one. And yet, here you are.

The executive knows what it costs when the energy isn't there at 3pm, when the decisions that matter most get made on fumes. The pastor knows the weight of preaching wholeness on Sunday while running on empty the other six days. The parent knows the quiet fear of the years passing and the children growing, and the honest question of whether they will have the capacity to be fully present for the moments that actually matter.

Three different lives. One shared experience. One shared gap.

THE PROBLEM IS NOT KNOWLEDGE.

THE PROBLEM IS NOT EFFORT.

You have read the books, downloaded the apps, and started the programs. You know protein matters. You know sleep matters. You know stress is quietly costing you. The problem is that you have been trying to change your behavior without changing your identity.

Every program you have started was built on willpower. White-knuckle it long enough and eventually it sticks. Except it never does. Willpower is a finite resource, and yours is already spent on everything and everyone that matters most to you.

These two ways are not divided by effort. They are divided by identity. And each of them has a name.

THE TWO WAYS HAVE NAMES

THE REBEL & THE SAINT

The way of the Rebel is this: driven, capable, disciplined in every area except this one. The Rebel starts strong and knows the right answer, but keeps returning to the same patterns — the old appetites, the old programming, the old rules about food and rest and what it means to take care of yourself. The Rebel is not the villain, and the answer is not to destroy it or pretend it isn't there. The drive is a gift. The appetite is not the enemy. The work is to bring the Rebel under authority — to receive what is good in it, redeem what can be redeemed, and reject only what has to go, until the same drive that built everything else finally serves this too. The Rebel's problem was never character. It is alignment.

The way of the Saint is this: not perfect, and not a flawless meal plan. Simply integrated. Aware. Capable of a conscious decision without shame, without rules, without deprivation. When the donut is on the table, the Saint decides — not out of fear, not out of a program, but out of identity. They eat it or they don't. Either way, they move forward.

*THE WORK IS NOT TO DESTROY THE REBEL.
IT IS TO MASTER THE GRAY.*

Most people live at one of two extremes: all in or completely off. Perfect eating or total abandon. A disciplined streak or a full collapse. The gray is the space between, and most people are terrified of it because they have never learned to operate there. The Saint does not. The Saint lives and leads in the gray — where real decisions get made, where identity gets tested, and where lasting change actually happens.

The Saint understands that almost nothing here is black and white. That one day of too many calories does not undo a month of work. That a fifteen-minute workout, nowhere in the plan, still beats the workout that never happened. That resting without guilt is a discipline of its own — every bit as important as training without excuses. Progression and rest are not opponents. The Saint honors both.

The drive and intensity of the Rebel. The awareness and intentionality of the Saint. Two ways — and the whole of this system is the road from the first to the second.

THE CREED

THE ROAD FROM THE REBEL TO THE SAINT IS NOT A SINGLE DECISION. IT MOVES THROUGH FOUR DIMENSIONS, BUILT IN ORDER — EACH ONE MAKING THE NEXT POSSIBLE.

BODY

First, you discipline your body — not to punish it, but as an act of stewardship. Your physical being comes first, because it is the foundation everything else is built on.

MIND

Then the mind is trained toward resilience and clarity. You stop being ruled by the old programming and start being transformed by a new way of seeing and thinking.

MISSION

A capable body and a resilient mind are the foundation of a life freed for the calling. We all have a mission to accomplish and gifts to use — not to bury.

CONNECTION

We were never meant to carry this alone. You are most yourself when you give yourself away — present for the people who need you most, and stronger for the ones who carry it beside you.

*BODY, MIND, MISSION, CONNECTION — THE FOUR DIMENSIONS OF
THE SAINT. NOT THE OPPOSITE OF THE REBEL. THE REBEL,
INTEGRATED.*

IF YOU WANT ANOTHER SET OF RULES TO FOLLOW UNTIL YOU QUIT,
CLOSE THIS NOW. IF YOU ARE READY TO CHANGE WHO YOU ARE,
KEEP READING.

PART TWO

THE DAILY RHYTHMS OF PHYSICAL STEWARDSHIP

THE RHYTHMS

THE RHYTHMS THAT BUILD THE LIFE YOU WANT TO LIVE

Now that you understand where you are going, the next question is how you get there. So let's make the whole game plain.

Changing your body comes down to four things. Eating enough **protein**. Taking in the right **calories** for your goal. **Moving** more than you did before. And getting a little **stronger** every time you train. Master those four and your body will change. Everything else in these pages can help — but none of it replaces them.

That is why we call the eight pillars rhythms, not rules: daily and weekly practices you return to, that stack and compound until they become the structure. The first four — the **Four Cornerstones** — are the ones that change your body, the house built on the rock. The next four — the **Sustaining Four** — are the conditions that keep you healthy and make the first four work.

ONE WARNING: DON'T CHASE "OPTIMAL"

Optimal is irrelevant until the basics are automatic — until you are lean, moving, training, and drinking enough water without thinking about it. Eat enough real food to stay healthy, and let your bloodwork show what your body actually *needs*, not what is theoretically ideal. Extra produce, finer details, and lab-guided tweaks all help, but they sharpen a foundation. They never build one. Nail the four cornerstones first.

CONSISTENCY BEATS PERFECTION. EVERY TIME.

THE FOUR CORNERSTONES

- 01 · PROTEIN
- 02 · NUTRITION CALIBRATION
- 03 · MOVEMENT
- 04 · RESISTANCE

THE SUSTAINING FOUR

- 05 · HYDRATION
- 06 · SLEEP, STRESS & REST
- 07 · RELATIONAL STEWARDSHIP
- 08 · FEEDBACK

01

THE FOUR CORNERSTONES

PROTEIN

THE STANDARD

0.8 TO 1.2 GRAMS OF PROTEIN PER POUND OF YOUR GOAL BODY WEIGHT, EVERY DAY.

Where you fall in that range depends on your goal. The deeper your deficit, the higher your protein needs to be — because a body under caloric stress needs more protein to protect the muscle you are working to build and keep. Your exact target is confirmed when your track is assigned. Until then, aim for 1 gram per pound of goal body weight.

— WHY IT MATTERS

Protein is not just a macronutrient. It is the foundational input, the one variable that sits in a different bracket than everything else you eat. Most frameworks treat it as one piece of a balanced equation. That is the wrong frame. Protein is the signal your body receives that muscle is worth keeping and building. Without it, a body under caloric stress will cannibalize the very tissue you are working to develop. You lose weight, but you lose the wrong kind. This is why protein is its own pillar. Not because it is one of eight important things, but because it is the foundation the other seven are built on.

— HOW TO HIT IT

Stop thinking in meals. Start thinking in anchors. Every meal has a protein anchor. One to two palm-sized portions of quality protein at breakfast, lunch, and dinner — scaled to your goal body weight — gets most people to 80% of their target before they have made a single complicated decision. Hit it every day. Not most days, not when it is convenient. Every day.

IF YOU ARE STARTING FROM ZERO

Aim for at least 30 to 40 grams of protein per meal as your baseline. That single standard, before anything else changes, will begin shifting how you feel, how you perform, and how your body responds.

THE LAWS OF PROTEIN

- Protein is the anchor of every meal.
- If protein is low, everything else breaks.
- Hunger rises when protein falls.
- Protein first. Everything else follows.

HIT YOUR PROTEIN. EVERYTHING ELSE GETS EASIER.

02

THE FOUR CORNERSTONES

NUTRITION CALIBRATION

THE STANDARD

CALORIES ANCHORED TO YOUR GOAL BODY WEIGHT. 800 GRAMS OF FRUITS AND VEGETABLES A DAY, MEASURED BY WEIGHT. 25 TO 35 GRAMS OF FIBER.

If protein determines what your body is built from, nutrition calibration determines how it runs — on two kinds of energy: what moves your body, and what fuels your cells.

— **CALORIES: ENERGY FOR THE BODY**

Calories are energy. Body weight comes down to one honest equation — energy in versus energy out, the law of thermodynamics — and it moves the scale whether or not you count. So we set two guardrails and leave the rest alone: a **protein floor** that protects your muscle, and a **calorie ceiling** that sets your direction, anchored to your **goal** body weight, not your current one. You start at the top of your range and step down only when the weekly average stalls for two full weeks — never inside the deficit on day one. Everything between the floor and the ceiling is yours, which is exactly why the plan survives travel, restaurants, and a glass of wine with no confession afterward.

— **NOURISHMENT: ENERGY FOR THE CELLS**

If calories energize the body, nourishment energizes the cells. Eight hundred grams of fruits and vegetables a day — real food, weighed — gives the inner workings of your body the scaffolding and raw material they need to run at their best. And it does something most people never feel, because they never get here: it regulates hunger and fullness. Cravings quiet. Hunger becomes legible. The body, finally getting what it needs, stops hoarding and starts communicating.

THE FILTER QUESTION

Does this food give me something — or does it just fill space? That question alone will change more decisions than any meal plan ever could. You are not following rules. You are developing awareness. That is what the Saint does.

THE LAWS OF NUTRITION CALIBRATION

- Calories are energy — in versus out moves the scale.
- Nourishment feeds the cells, not just the scale.
- Protein is the floor. The ceiling is the direction. The middle is free.
- Eat foods that give, not foods that fill space.

ENERGIZE THE BODY. NOURISH THE CELLS. BOTH EVERY DAY.

03

THE FOUR CORNERSTONES

MOVEMENT

THE STANDARD

7,500 STEPS TO LEAVE "SEDENTARY." 10,000 FOR GENERAL HEALTH. 12,000 WHEN FAT LOSS LEADS.

— WHY STEPS

Steps are a proxy for something more important: the reduction of prolonged sedentary time. Sitting for extended periods without interruption elevates cortisol, suppresses metabolism, increases inflammation, and blunts insulin sensitivity. No amount of training fully reverses what chronic stillness does to the body over time. Daily movement keeps the body in motion, breaks up sedentary blocks, and supports fat metabolism, cardiovascular health, and mental clarity in ways a single workout session simply cannot replicate.

— HOW TO HIT IT

You are not going to find your steps. You are going to build them into the structure of your day. Park further away. Take the stairs. Walk during phone calls. Add a ten-minute walk after every meal. Stack small decisions until the number takes care of itself.

IF YOU ARE STARTING FROM ZERO

Begin where you are. If your baseline is 2,000 steps, start there and build. The direction is always forward.

THE LAWS OF MOVEMENT

- Movement is not optional. It is essential.
- Sedentary living is the baseline problem, not a lack of workouts.
- Daily movement beats occasional intensity. Every time.
- If it is not scheduled, it does not happen.

MOVE EVERY DAY. NON-NEGOTIABLE. NO EXCEPTIONS.

04

THE FOUR CORNERSTONES

RESISTANCE

THE STANDARD

2 TO 4 RESISTANCE TRAINING SESSIONS PER WEEK, EVERY WEEK.

Training 2 to 3 days a week, full-body workouts are your best option. At 3 to 4 days, you have flexibility — full-body still works, or you can move to an upper/lower split. Hit each muscle group a minimum of two sets per week, each set one to two reps shy of failure, progressing each week in either weight or reps.

— WHY RESISTANCE TRAINING

Most purpose-driven people who exercise gravitate toward cardio. It is time-efficient, it feels productive, and the feedback is immediate. It is also the least effective tool for the change most of them are actually after. Resistance training builds muscle, and muscle is metabolically expensive tissue — your body burns more at rest simply to keep it. It improves insulin sensitivity, supports healthy hormones, increases bone density, and is one of the strongest predictors of quality of life in the decades ahead. You are not training to look good at the beach. You are training to be capable at 40, 60, and 80.

— PROGRESSIVE OVERLOAD: THE ONLY RULE THAT MATTERS

Showing up is not enough. Showing up and doing the same thing you did last week is maintenance at best, regression at worst. Progressive overload is the principle of consistently challenging your body beyond what it has already adapted to — more weight, more reps, better form, less rest. It is the engine of every result this system produces in the gym.

THE LAWS OF RESISTANCE

- Muscle is the asset. Protect it and build it.
- Cardio burns calories. Resistance builds capacity.
- Showing up maintains. Progression transforms.
- Progressive overload is not a training principle. It is the only training principle.

TRAIN WITH INTENTION. BUILD A BODY THAT LASTS.

05

THE SUSTAINING FOUR

HYDRATION

THE STANDARD

HALF YOUR BODYWEIGHT IN OUNCES OF WATER PER DAY —
MINIMUM.

— HOW TO START

The single highest-leverage hydration habit in this system is also the simplest: start every morning with 16 to 20 ounces of water before anything else. Before coffee. Before email. Before the day gets its hands on you. You wake up dehydrated by default. Rehydrating first thing resets your baseline, jumpstarts digestion, and gives your brain the input it needs to function before you start making decisions. Consider adding a quality electrolyte or a pinch of high-mineral salt to support cellular hydration more effectively than plain water alone.

— HYDRATION AND HUNGER

The hunger and thirst signals in the brain originate from the same region. Mild dehydration is frequently misread as hunger, leading to calories that have nothing to do with actual need. Before you reach for a snack, drink 16 ounces of water and wait ten minutes. Travel, training, and heat are where hydration breaks down most often and where the consequences show up fastest. On training days, add 16 to 20 ounces around your session. In heat, add more.

THE LAWS OF HYDRATION

- Hydration starts before anything else.
- Thirst is often mistaken for hunger.
- A dehydrated body underperforms in every domain.
- Hydrate first. Decide second.

DRINK MORE WATER. LEAD BETTER. IT REALLY IS THAT CONNECTED.

06

THE SUSTAINING FOUR

SLEEP, STRESS & REST

THE STANDARD

7 TO 9 HOURS OF SLEEP PER NIGHT. ONE STRESS PRACTICE,
TESTED 14 DAYS. ONE REST RHYTHM, PROTECTED WEEKLY.

— SLEEP IS THE ANCHOR

Poor sleep elevates cortisol, suppresses testosterone and growth hormone, increases hunger hormones, blunts insulin sensitivity, and impairs the cognitive function you depend on to lead. In plain terms: poor sleep makes you hungrier, weaker, slower, and harder to be around. You cannot out-train it. You cannot out-eat it. At some point the debt comes due. Four levers govern quality — **consistency** (same sleep and wake time, even on weekends), **environment** (cool, dark, quiet — your body temperature must drop to initiate deep sleep), **screens** (blue light in the 60 to 90 minutes before bed suppresses melatonin), and **alcohol** (it speeds sleep onset but wrecks sleep architecture).

— STRESS: BUILD YOUR PRACTICE

Stress is not the enemy. Unmanaged, chronic stress with no deliberate outlet is. There is no universal protocol because there is no universal leader. Choose one practice, run it consistently for 14 days, and ask one question: do I feel measurably different? If yes, keep it. If not, rotate. Options: morning stillness (10 to 15 minutes, no phone), box breathing (4 in, hold 4, out 4, hold 4), a deliberate walk with no destination, an evening debrief to close open loops, or a hard training session for those who recover through it.

— REST: THE RHYTHM YOUR BODY WAS BUILT FOR

Rest is not laziness, and it is not earned by suffering enough first. It is a physiological requirement most driven, purpose-led people have quietly eliminated. There is a reason the Sabbath principle has endured across millennia — not as a rule, but as a biological truth. One day in seven of genuine rest recalibrates the nervous system and rebuilds the reserves that sustained output depletes. Protect a weekly Sabbath rhythm, a lighter deload week every four to six, and a daily block with no input, no productivity, no decisions.

THE LAWS OF SLEEP, STRESS & REST

- Sleep is the anchor. Everything else builds on it.
- Stress without a recovery practice compounds.
- Unmanaged output without rhythm produces collapse.
- Rest is not a reward. It is a requirement.

STEWARDSHIP YOUR RECOVERY. YOUR LEADERSHIP IS DOWNSTREAM OF IT.

07

THE SUSTAINING FOUR

RELATIONAL STEWARDSHIP

THE STANDARD

THE PEOPLE CLOSEST TO YOU DON'T NEED MORE OF YOUR TIME.
THEY NEED MORE OF YOU — PRESENT, GROUNDED, AND NOT
RUNNING ON THE LAST 10% OF WHAT THE DAY LEFT BEHIND.

— THE PRINCIPLE

Mission-driven men and purpose-driven women are the most generous people in every room except the ones that matter most. They give their best hours, their sharpest thinking, and their fullest energy to their work — and bring the remainder home. Not out of selfishness. Out of depletion.

This pillar is not about scheduling date nights or communicating better. It is about recognizing that your physical state is a relational variable. How you sleep, how you eat, how you move — these are not just personal health decisions. They determine the quality of your presence with the people who need you most. The Saint does not hand their family the leftovers. They steward their energy the same way they steward everything else that matters — with intention, with a system, and with the understanding that showing up depleted is its own kind of absence.

A PRACTICAL START

Presence is a rhythm, not a grand gesture. Build your family into the ones you already keep — shared meals on the same principles, shared movement, a protected evening rhythm. This is not a bonus. It is the extension of this pillar into daily life. The goal is not balance. It is presence.

THE LAWS OF RELATIONAL STEWARDSHIP

- Your physical state is a relational variable.
- Presence requires margin. Depletion is its own kind of absence.
- The people who matter most get who you are, not what is left of you.
- Stewarding your energy is stewarding your relationships.

STEWARD YOUR ENERGY. THE PEOPLE WHO NEED YOU MOST ARE PAYING ATTENTION.

08

THE SUSTAINING FOUR FEEDBACK

THE STANDARD

TEN BIOFEEDBACK MARKERS, TRACKED AND ASSESSED EVERY WEEK.

■ Energy

■ Hunger

■ Sleep

■ Libido

■ Mental Acuity

■ Inflammation

■ Strength

■ Mood & Resilience

■ Digestion

■ Training Recovery

— THE FEEDBACK PROTOCOL

Weigh at least three times a week, same conditions, and read the **weekly average** — never a single morning. Protein is the exception: it is a daily floor, hit every day, never averaged. Track your meals consistently, not obsessively. Rate all ten markers weekly with a simple high, medium, or low. Then read trends over a minimum of 14 days. One bad day is noise. One bad week might be noise. Two weeks of consistent signal is your body telling you something worth listening to.

This is what separates the Saint from the Rebel. The Rebel white-knuckles through the signals and wonders why the results stop coming. The Saint stays in conversation with the body — adjusting, recalibrating, and moving forward without losing the thread. You stop seeing your body as something happening to you and start seeing it as something you are in conversation with. That awareness is identity-level change.

ONE DAY IS NOISE. TWO WEEKS IS A TREND.

THE LAWS OF FEEDBACK

- One day is noise. Two weeks is a trend.
- Data removes emotion. Patterns create clarity.
- What you track, you can change.
- Awareness is the beginning of control.

PAY ATTENTION. YOUR BODY HAS BEEN TRYING TO TELL YOU SOMETHING FOR YEARS.

STANDARDS & RHYTHMS

STANDARDS AND RHYTHMS BECOME A SYSTEM

Here is how the whole thing fits together. A **standard** is a number you hold. A **rhythm** is what you do to hit it. Put the two together and you have a system — and the Legacy Performance Operating System is simply how you run it, day after day, season after season.

— **THE STANDARDS** the numbers you hold

YOUR PROTEIN FLOOR

Hit it every day. Never averaged.

YOUR CALORIE CEILING

The direction. Own the "in."

YOUR STEP TARGET

Out of sedentary, every day.

— **THE RHYTHMS** what you do to hit them

LOG & MOVE, DAILY

Track the food. Take the walk.

TRAIN, 2× WEEKLY

The resistance rhythm. Progressive.

CHECK IN, WEEKLY

Read the trend. Answer your week.

*THE STANDARDS ARE THE WHAT. THE RHYTHMS ARE THE HOW.
TOGETHER, THEY ARE THE SYSTEM.*

The Rebel waits for motivation. The Saint returns to the rhythm. This is not a checklist to complete — it is an identity to inhabit. Expand your standard only off the back of your data, never off a hunch.

THE MINIMUM EFFECTIVE DOSE

IF YOU ONLY DO THREE THINGS

Eight foundations can feel like a lot when you are starting from a standstill. If your life is in a demanding season, here is where to anchor.

PROTEIN

Hit your target every day. This single variable protects muscle, stabilizes hunger, steadies energy, and keeps your brain online when everything else is pulling it under.

STEPS

Consistent daily movement, built into your day. No gym required, no schedule overhaul. Just the number, taken care of by small decisions.

SLEEP

Protect your recovery. Without it, every other effort in this system returns diminished results. You cannot outwork a sleep deficit.

These three do not replace the others. They create the traction that makes the others possible. Start here. Build from here. The full system is always waiting when you are ready.

*AWARENESS BEFORE ACTION.
THE LONG ROAD IS THE REAL ROAD.*

PART THREE

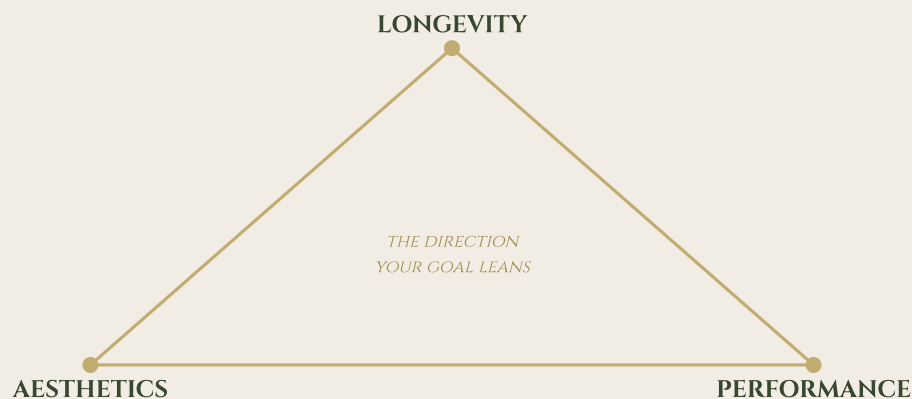

CHOOSING THE DIRECTION THAT LEADS YOUR SEASON

THE TRIANGLE OF AWARENESS

THE FOUNDATIONS ARE UNIVERSAL. DIRECTION IS A CHOICE.

Keep the eight rhythms and your body will respond, regardless of where you start. But stewardship at the highest level requires more than consistency. It requires direction. Every goal you carry leans toward one of three dimensions — **aesthetics, performance, or longevity**. Knowing which one your goal serves is what lets you sequence it correctly. That awareness is the Triangle.

HOW YOU LOOK

AESTHETICS

Body composition and leanness — the outside finally matching the discipline you carry everywhere else. Led by the Lean track.

WHAT YOU CAN DO

PERFORMANCE

Strength, energy, capacity under pressure, presence at 3pm. The ability to show up fully. Led by the Strong track.

HOW LONG IT LASTS

LONGEVITY

Healthspan and better markers — the body at 40 that still serves you at 80. Held by the Sustain track.

THE TRIANGLE NAMES THE DIRECTION. YOUR TRACK IS HOW YOU EXECUTE IT.

Each dimension runs on a track: Aesthetics on **Lean**, Performance on **Strong**, Longevity on **Sustain** — the maintenance and longevity track. And most people travel them in order — get lean first, grow into strong, then hold it all. Even a longevity goal like better bloodwork usually starts on the Lean track: reduce the systemic load, then refine with data. The labs and physician-guided support are the precision layer for those who go All-In — eligibility, prescriptions, and dosing determined solely by the licensed provider group, and outcomes vary.

THE DECISION GATE

ONE ASSESSMENT SETS YOUR STARTING POINT

THE GATE

MEN ABOVE 20% BODY FAT: LEAN LEADS FIRST — THE GOAL IS TO GET YOU UNDER 15%.

WOMEN ABOVE 30% BODY FAT: LEAN LEADS FIRST — THE GOAL IS UNDER 25%.

This is not about getting stage-lean or chasing a number on a scale. It is about sequencing. Above roughly 20% body fat for men and 30% for women, excess fat increasingly behaves as a systemic stressor — it affects hormones, energy, sleep quality, inflammation, and cognitive performance. Until that load is reduced, the other dimensions are working against resistance they do not need to carry. So we get you under the line first, driving toward about 15% for men and 25% for women, then reassess. Performance and longevity goals progress more naturally, and more effectively, once the systemic load is lifted. If you are already below these thresholds, your direction is set by your primary goal, and your coach helps you name which one leads.

YOUR ONE THING

*WHAT DOES SUCCESS LOOK LIKE FOR YOU IN 90 DAYS —
NOT ON A SCALE, BUT IN YOUR LIFE?*

Not a number. A feeling. A capacity. A moment. Write it down. That answer, combined with your body-composition assessment, becomes the filter for your track. It is the most important question in this entire system, because it determines not just what you are doing, but why. The Triangle tells you which direction. The Foundations Protocol tells you where you are. Together, they tell you exactly where to go.

PART FOUR

THE TWO-WEEK FOUNDATIONS PROTOCOL

THE TWO-WEEK FOUNDATIONS PROTOCOL

WHERE YOU ACTUALLY ARE — MEASURED, NOT GUESSED

This is not a transformation program. It is not a diet. It is a data-collection and skill-building protocol, designed to answer one question with precision.

*WHAT IS MY REAL STARTING POINT — AND WHAT IS THE
VERY NEXT THING THAT CLOSES THE GAP?*

Most people skip this step. They jump straight to a calorie target or a meal plan and wonder why it stops working in six weeks. Foundations fixes both problems at once: no data, and no runway. Two weeks. Two jobs. By the time your track is assigned, you are not starting a new program. You are confirming the direction you have already begun moving.

— THE FOUR LEVERS

These are the four things you can control without labs — the whole game at the base. Everything beyond them is significantly more effective with bloodwork and genetic testing, but none of it is required to start. So Foundations sets smart defaults for the rest instead of faking precision. Simpler is the point.

CALORIES · PROTEIN · STEPS · RESISTANCE

The Foundations Protocol — and the entire program that follows — exists to master these four. Remove one and the structure weakens; ignore one long enough and the whole thing gets harder than it needs to be. The next two weeks are about learning to read these four inside the rhythms of your actual life, until they stop feeling like a program you follow and start feeling like a standard you live.

BEFORE YOU CHANGE ANYTHING

YOU THINK YOU KNOW. THE DATA USUALLY DISAGREES.

This is not a judgment. It is the entire reason the next two weeks exist. Almost everyone starts right here — certain they already know their numbers, and quietly off by more than they would ever guess. Not because they are lying. Because the truth is invisible until you track it.

"I'M EATING ABOUT 1,800 CALORIES."	The oil in the pan, the handful of nuts, the bites off your kid's plate, the cream in three coffees — none of it got counted. Most people underestimate intake by 20 to 40%. The food is real whether you tracked it or not.
"I TRAIN HARD."	Do you know what real failure feels like — one or two reps from the end? Or do you stop when it gets uncomfortable and call it a hard set? Hard and done are not the same thing.
"I GAVE THE GYM EVERYTHING."	You slept five broken hours and ran on caffeine, so "everything" was maybe 60% of what your body can actually do. You can't out-train the tank you showed up with.
"I SLEEP EIGHT HOURS."	Two of them were spent scrolling in bed. Time in bed is not time asleep — and your body only recovers on the second one.

YOU ARE NOT FAILING. YOU HAVE BEEN FLYING BLIND.

You were never lying — the truth was simply invisible. But from here, the only lie left is choosing not to look. So we look, honestly, for two weeks.
You cannot change what you refuse to see.

THE PROTOCOL

TWO WEEKS. TWO JOBS.

Both weeks serve one goal: mastering the four cornerstones. And you cannot master what you cannot yet see — so we start with an honest, accurate look at exactly where you stand.

WEEK ONE**TRACK EVERYTHING. CHANGE NOTHING.**

You get your numbers on day one — your calorie ceiling, your protein floor, your step target, and a resistance floor of at least two days a week. Then your only job is to track everything against those numbers *without forcing change*. You will not hit them yet, and you are not supposed to. You are just seeing where you actually are. Track it as accurately as you can — weighed and logged is the gold standard; a photo the app estimates works when you cannot. Aim for the honest number, down to the sauces and the bites. The gap you discover is not failure. It is data — the fuel for week two.

The read: protein is a daily floor, hit every day and never averaged. Calories, steps, and bodyweight are read on the weekly average, never a single day. One day is noise.

WEEK TWO**ADJUST & ASSIGN.**

Now you read your baseline and start closing the gaps — protein floor first, then the ceiling, steps, and resistance. You learn the Lean / Strong / Sustain directions as education, and your coach assigns the one that leads your season. You set your Daily Standard. And the Identity Audit lands here, on purpose — after the data, so it has teeth. You have seen who you have been. The only question left is who you are becoming.

YOU ARE NOT FAILING. YOU ARE GATHERING DATA.

READ THE DATA. FIND YOUR TRACK.

THE MOST INFORMED STARTING POINT YOU HAVE EVER HAD

Two weeks of real information changes the assignment from a guess into a read. Here is how the data points you to a direction.

WHAT THE DATA SHOWS	THE READ	YOUR TRACK
Carrying excess body fat; intake above your goal-weight maintenance; weight trending up	You are in a surplus. Direction is down.	LEAN
Under-eating with a metabolism adapted down; weight stuck despite low intake — or muscle is the primary goal	Rebuild the base first, then build. Direction is up, slowly.	STRONG
At or near your goal weight; strong habits; body composition where you want it	Hold and protect what you built.	SUSTAIN

WHY "UP, SLOWLY" IS NOT DELAY

If you have been under-eating for years, eating more is not the enemy — it is the repair. A slow, structured calorie increase brings an adapted metabolism back to a functional level, the level where a real, productive fat-loss season finally becomes possible. You are not delaying progress. You are building the foundation that makes progress sustainable.

ONE DAY IS NOISE. TWO WEEKS IS A TREND.

PART FIVE

LEAN · STRONG · SUSTAIN

The 8 Pillars do not change. Your Triangle has named the direction that leads. Now your Foundations data turns that direction into a precise, personalized plan. Most clients move through the tracks in order — a Lean season, then a Strong season, then Sustain to hold it all together.

A THE FAT-LOSS TRACK

LEAN

Your weight has been trending up and your intake sits above your goal-weight maintenance. Your body is in a surplus. The goal is a structured, sustainable deficit that protects muscle while reducing body fat.

— THE ADJUSTMENT CYCLE

You start at the top of your calorie range, anchored to your goal weight, and step down only when your weekly-average weight stalls for two full weeks. Never start inside the deficit — it spends your entire runway on day one and leaves nothing to adjust when you stall. If your weight was already trending down, do not reduce yet. Hold, let the body respond, and adjust only when it plateaus. Let it come off slowly, or the body fights back.

TWO OPTIONAL ACCELERATORS

Inside a Lean season, two short-term protocols are available for those who qualify — men above 25% body fat, women above 35%, with Foundations complete and the pillars in place. The **2-Week Shred** creates a fast, visible early win to build momentum. The **4-Week Carb Cycle Sprint** uses strategic variation across the week to keep fat loss moving while preventing the adaptation that makes long deficits unsustainable. These are accelerators, not replacements. The Shred creates the spark. The Lean phase sustains the fire.

DO THE WORK. TRUST THE DATA. LET THE SYSTEM LEAD.

B

THE MUSCLE & METABOLISM TRACK

STRONG

Two kinds of people lead with Strong. The first: your intake has been confirmed below your goal-weight maintenance and your weight is still stubbornly stable or climbing. This is the signature of a metabolism that has adapted downward — your body has learned to function on less, and it is holding on to everything it has. The goal is not to eat less. The goal is to rebuild.

Increase your daily intake slowly, in small steps, one week at a time. Do not rush it. A structured increase brings your metabolism back to a functional level, one where a real, productive fat-loss season becomes possible later.

THE SECOND REASON TO BE HERE

Strong is also the right track if your primary goal is adding lean muscle. If you are here to get stronger, more capable, and build a body with more capacity — this is your starting point. You feed the goal, train with progressive overload, and let the muscle come.

THE REFRAME

YOU ARE NOT DELAYING PROGRESS. YOU ARE BUILDING THE FOUNDATION THAT MAKES PROGRESS SUSTAINABLE.

C

THE MAINTENANCE & LONGEVITY TRACK

SUSTAIN

Sustain is not where you start. It is where you arrive. It is assigned when you have done the work — when a Lean or Strong season has produced real results, your metabolism has been rebuilt or your composition has meaningfully shifted, and you are at or approaching your goal weight. It is the track that follows success, not the one that avoids the work.

Think of it as a structured season of holding — a deliberate phase that lets your body consolidate the progress you made, your hormones recalibrate, and your mind experience what it feels like to live at this level. It is also the track you return to during busy seasons, extended travel, and high-demand stretches of life, when the priority is protecting what you built rather than pushing for new adaptation.

WHERE LONGEVITY LIVES

This is where the longevity conversation belongs. You do not chase "long life" as a separate goal. A lean, strong body, held for decades, is the play. For those who go all-in, provider-guided bloodwork and physician-reviewed protocols become the precision layer on top of the work you are already doing. Eligibility, prescriptions, and dosing are determined solely by the licensed provider group. Every person is unique, and outcomes vary.

*THIS IS WHERE THE SAINT LIVES.
SUSTAIN IS NOT THE END OF THE ROAD. IT IS PROOF THAT THE
SYSTEM WORKED.*

PART SIX

PROXIMITY IS THE PRODUCT

WHAT COMES NEXT

A SYSTEM IN ISOLATION IS JUST INFORMATION

The system you are holding works. The foundations are proven. The protocol is clear. But information is the one thing you already have too much of. What you need is proximity — to a coach who knows your data, your season, and your goals, and to a room of people who understand the weight of the life you carry and are choosing to lead themselves well anyway.

THE FLAGSHIP

BUILT FOR MORE

1:1 COACHING · TWO WAYS IN

A full coaching partnership for the leader who is done figuring it out alone. Personal, weekly eyes on your data. Adjustments made to *your* week, not a template. This is where the system becomes specifically yours.

CORE

\$4,000 · 6 MONTHS

- Personalized track assignment
- Individualized programming
- Weekly eyes on your dashboard
- Weekly personalized adjustments
- Direct async coaching access
- Complete Nutrition System build
- The Standard Guarantee

Coaching only. The full system, personally coached.

ALL-IN

\$6,000 · 6 MONTHS

- Everything in Core
- The Genetic Blueprint
- Provider-guided bloodwork
- Physician-reviewed protocols
- The full precision layer
- Real-time access when life demands it

The complete stack. Nothing left on the table.

Built for More is application-only, with a waitlist. Every engagement begins with the Foundations Protocol — real data before any track is assigned. The medical layer is delivered through our licensed provider group and pharmacy-fulfilled; eligibility, prescriptions, and dosing are determined solely by the licensed providers, and outcomes vary.

NOT READY FOR THE FULL PARTNERSHIP?

THE LEGACY PERFORMANCE COMMUNITY · FROM \$97/MO

The system, the app, weekly group coaching, and a room of leaders doing the work alongside you. It is where many begin. But proximity is the product — and the fastest, most certain results come from the room where someone is watching your week.

PART SEVEN

THIS IS WHERE IT STARTS

THIS IS WHERE IT STARTS

YOU HAVE BEEN HERE BEFORE

Not here — not with this document, not with this system. But here in spirit. The moment of recognition. The moment you know, with complete clarity, that something has to change. That the gap between who you are and how you are living has become too wide to ignore.

Most people close that gap with a program. They download the app, start the diet, commit to the gym, and ride the wave of motivation until it runs out — which it always does. Then they wait for the next moment of recognition. And the cycle continues. You know this cycle. It is the Rebel's cycle. And the cost of staying in it is not just physical. It is cumulative.

The executive who leads with excellence but cannot sustain the energy the role demands. The pastor who preaches wholeness on Sunday and runs on empty the other six days. The parent who wants to be fully present and finds themselves checked out by 7pm. These are not motivation problems. They are stewardship failures, and they compound over time.

THE BODY YOU HAVE AT 50 IS LARGELY THE RESULT OF THE DECISIONS YOU MAKE BETWEEN NOW AND THEN. NOT THE DRAMATIC DECISIONS. THE DAILY ONES. THAT IS NOT PRESSURE. THAT IS CLARITY.

You already carry a standard of excellence in every room you lead. This is simply the invitation to carry it here too — in the one body you were given, the one life you are actually living, the one legacy you are actually building. Your body is not separate from your leadership. It is the vehicle your leadership travels in. Steward it accordingly.

*THE SYSTEM WORKS. THE PATH IS CLEAR.
THE ONLY QUESTION LEFT IS THIS:*

*WILL YOU CONTINUE AS THE REBEL — OR
BEGIN TO LIVE AS THE SAINT?*

WELCOME TO LEGACY PERFORMANCE

YOU LEAD OTHERS WELL. IT'S TIME TO LEAD YOURSELF.
